InTag
MRP System

Industrial Asset & Manufacturing Platform

Unified operations for manufacturers who demand more.

Version 1.0 · March 2026 · CONFIDENTIAL

Manufacturers Struggle with Fragmented Tools

Disconnected systems create costly inefficiencies across every department

01

Siloed Data

Asset records in spreadsheets, maintenance in emails, inventory in separate ERP modules — no single source of truth, leading to costly errors and blind spots.

02

Manual Processes

Paper-based approvals, manual work orders, and reactive-only maintenance drain productivity and increase the risk of costly equipment failures.

03

Compliance Risk

Without automated document control and audit trails, maintaining ISO 9001, ISO 55001, and industry certifications becomes expensive and unreliable.

What is InTag?

InTag is a modular B2B SaaS platform purpose-built for industrial and manufacturing organizations.

It integrates six mission-critical operational areas — asset management, documents, manufacturing, maintenance, inventory, and workflows — into a single, secure, cloud-hosted platform.

The result: one login, one data model, one source of truth.

PRIMARY MARKETS

- Mid-to-Large Manufacturers
- Pharmaceuticals
- Food & Beverage
- Automotive & Aerospace

6 Integrated Modules

- Asset Management
- Document Management
- Manufacturing
- Maintenance (CMMS)
- Inventory
- Workflows & Approvals

Six Core Platform Modules

InTag
MRP System

01
Asset Management

Full lifecycle from acquisition through disposal — depreciation, condition monitoring, inspections, transfers, and warranty tracking.

02
Document Management

ISO-compliant version control, digital approval workflows, full-text search, and role-based access with electronic signatures.

03
Manufacturing

Production orders, multi-level BOM, routing & work centers, lot traceability, OEE calculations, and shop floor control.

04
Maintenance (CMMS)

Corrective, preventive, and predictive work orders, PM auto-generation, MTBF/MTTR analytics, and SLA compliance tracking.

05
Inventory

Multi-warehouse management, cycle counts, ABC analysis, expiry tracking, reorder automation, and weighted average costing.

06
Workflows & Approvals

Configurable approval chains, escalation rules, email/in-app notifications, pre-built templates, and immutable audit trails.

Asset Management

Asset Registry

Hierarchical asset tree with parent-child relationships, QR/barcode support, location and department assignment.

Depreciation Engine

Straight-line, declining balance, sum-of-years, and units-of-production with automated monthly calculations and forecasting.

Condition Monitoring

5-point inspection scoring, configurable checklists, condition-based alerts, and warranty expiry notifications.

Lifecycle Management

Full audit trail from acquisition through commissioning, operation, decommission, and disposal.

4

Depreciation Methods

RBAC

Role-Based Access Control

ISO

55001 Compliance Ready

Document Management

InTag MRP System
Module 02

ISO-Compliant Document Control

- Version-controlled check-in/check-out with full revision history
- Automated review scheduling aligned to ISO 9001 requirements
- Multi-level digital approval workflows with electronic signatures
- Full-text search across PDF, Word, and Excel documents
- Department-based access control with external sharing & watermarks
- Controlled distribution with acknowledgement tracking

Supported Document Types

- SOPs
- Work Instructions
- Engineering Drawings
- Contracts
- Quality Records
- Forms & Templates

Manufacturing & Maintenance

InTag MRP System

Manufacturing · Module 03

- Production orders with priority management & capacity planning
- Multi-level BOM with version control and phantom assemblies
- Routing & work centers with setup/run time and labor tracking
- Lot/batch/serial traceability from raw materials to finished goods
- OEE = Availability x Performance x Quality (per work center)
- In-process quality checks with non-conformance management

Maintenance (CMMS) · Module 04

- Corrective, preventive, predictive & emergency work orders
- Calendar-based & meter-based PM auto-generation
- SLA monitoring with breach alerts and priority-level breakdown
- MTBF, MTTR & Availability calculations from failure log data
- Failure pattern detection and repeat failure identification
- Labor, parts & contractor cost tracking with full audit trail

Inventory & Workflows

InTag
MRP System

Inventory Management · Module 05

- Multi-warehouse with bin/shelf tracking and stock transfers
- Receipts, issues, adjustments & cycle counts with audit trail
- Min/max levels, reorder points & automated purchase triggers
- Weighted average costing with per-warehouse valuation reporting
- ABC analysis, stock aging, expiry tracking & inventory turnover
- Lot/serial traceability linked to production and shipping records

Workflows & Approvals · Module 06

- Sequential, parallel & matrix-based approval chains
- Configurable escalation rules with automatic role-based routing
- Email, in-app, and SMS notifications at each workflow step
- 6 pre-built templates for common processes (purchase, docs, change)
- Delegation, substitution & manual escalation support
- Immutable audit trail: user, timestamp, action, and comments

Why InTag?

Truly Unified

Six modules in one platform — no integration headaches, one login, one data model, one source of truth.

Built for Compliance

ISO 9001, ISO 55001, HACCP, and GMP compliance baked in — not bolted on — with full audit trails everywhere.

Modular & Scalable

Start with the modules you need. Add more as you grow. Per-module licensing keeps costs aligned with value.

Enterprise Security

AES-256 encryption, JWT auth, OWASP-hardened, GDPR-compliant, and SOC-ready from day one.

Modern Architecture

.NET 10, clean layered design, Azure-native deployment, CI/CD pipeline, and full REST API for integrations.

Insight-Driven

Executive dashboard with cross-module KPIs, compliance scores, critical alerts, and one-click Excel export.

Ready to unify your operations?

InTag brings your assets, documents, production, maintenance, inventory, and approvals into one powerful platform.
